## The issue

Considering the high cost per metre of the ground assigned to warehousing buildings, there has been a strong demand for goods storage at increasingly higher levels, leading to warehouse vertical designs to allow quite significant savings in the building costs and a time gain in the handling operations.

## The solution

Lift-tek Elecar has always listened to their customers needs and responded to the new demands coming from the handling world by designing a new mast series for elevation from 12 up to 15 metre lift heights. These masts not only offer high lift heights but also a reduced closed height thanks to the four-stage type of design.
