Il problema

The Global Market requirements has led to a high demand of storage space inside warehouse buildings as an increasingly greater quantity of goods needs to be stored at a high index level of material rotation. To increase the storage space the crossing aisles have become narrower to the point that standard trucks are not able to steer to enter the pallets.

Solution

Liftek Elecar has always paid great attention to the market evolution and has completed their mast series offer, designing a new mast range for trilateral trucks, which are ideal for warehouses with high storage density and aisles with reduced width up to 1.6m.
